07 SYNC - Synchronization Vaulsworg Aneka Soal Ujian Sistem Operasi Rahmat M. Samik-Ibrahim et.al. Rahmat M. Samik-Ibrahim et.al.

© 2016 - 2021 — Rev: 39 - 15-Sep-2021. URL: https://rms46.vlsm.org/2/202.pdf. Kumpulan soal ujian lainnya dapat diakses melalui URL: https://os.vlsm.org/. Silakan mengubah, memperbanyak, serta mendistribusikan dokumen ini selama tidak menghapus ketentuan ini!

1. **2016-1**

Circle or cross: "T" if True – "F" if False.

- A semaphore is a data structure.
- T / FSemaphores can not be used for avoiding dead locks
- T / FA monitor is a programming language construct
- T / FMonitors encapsulate shared data structures.
- T / FBoth semaphores and monitors are distributed as function calls.
- T / FMonitors use condition variables, while semaphores do not.

2. **2016-2**

```

K i r i - + - + - (0)

4. **2017-2**

In this mini-Sudoku 4x4 — each **column**, **row**, and 2x2 sub-grid **box** — should contain the digits of: **1**, **2**, **3**, **or 4**. This C program "07-mini-sudoku-4x4.c" is using a 3 dimensional array called "cellSudoku[][][]". If "cellSudoku[row][column][0] == 0" (or: no value), "cellSudoku[row][column][1]" to "[4]" will contain of all values that are possible (or guesses).

- (a) How many Semaphores were created in that program?
- (b) Specify what the names of those Semaphores are!
- (c) How many threads were created in that program?
- (d) Specify what the (unique) names of those threads are!
- (e) How many critical zone(s) are there in that program?
- (f) Specify the line numbers of those critical zone(s)!
- (g) Name the function that receives the input file "07-data.txt" in that program above!

Program Code 07-mini-sudoku-4x4.c (using 99-myutils.h and 99-myutils.c from the DEMO set.)

6. **2018-1** (continued)...

- (a) Assume the Parent PID is 1000 and the Child PID is 1001. What is the output of the program above?
- (b) Name all four (4) semaphore!
- (c) What is the purpose of line 68?
- (d) What is the purpose of line 71?

- (e) What is the purpose of line 77?
- (f) What is the purpose of line 84?
- (g) How many Critical Section(s) is/are there in the program above? Where/which lines are the Critical Section(s)?
- (h) Explain briefly the purpose of function fflush(NULL) in line 50!
- (i) What is the purpose of lines 98 101?

7. **2018-2** (See https://rms46.vlsm.org/2/201.pdf 2018-2)

- (a) Name all three (3) semaphores!
- (b) What is the purpose of lines 65 & 66?
- (c) What is the purpose of lines 74 & 75?
- (d) What is the purpose of lines 88, 89, 113 & 114?
- (e) What is the purpose of line 90 in regard of lines 91 & 115
- (f) Is there any Critical Section(s) in the program (Yes/No)? If "Yes", which line(s)?
- 8. **2019-1** (See https://rms46.vlsm.org/2/201.pdf 2019-1)
 - (a) What is the purpose of semaphores "turns[]" (See lines 79-80, 94, 95)?
 - (b) What is the purpose of semaphore "mutex" (See lines 82, 100, 106)?
 - (c) Explain why the final "**rTime**" value of each rider will always be unique (See lines 101-104)!
 - (d) Explain why the program output will always be printed in a proper "rTime" order (See lines 101-104)!
- 9. **2019-2** (See https://rms46.vlsm.org/2/201.pdf 2019-2)

Modify lines 66 to 74, so that the child of fork() (line 66), will be executed first at line 75.
